

HARIKARAN CHETTIYAR

FULL-STACK SOFTWARE ENGINEER

Pune, India | harikaran.chettiyar@gmail.com | hari-pi.com | github.com/Hari-Pi

PROFESSIONAL SUMMARY

Full-stack software engineer who turns product requirements into reliable, deployed software across web products, mobile applications, automation, and Linux systems. Owns interfaces, backends, domains, deployment, performance, and handover.

TECHNICAL SKILLS

Languages	Python, JavaScript, TypeScript, Dart, SQL, Bash
Web & Mobile	Django, React, Next.js, Node.js, Express, Flutter, REST APIs, WebRTC
Data & Auth	Supabase, PostgreSQL, MongoDB, SQLite, Next-Auth, email authentication
Delivery & Systems	Git, GitHub Actions, CI/CD, Docker, Vercel, Cloudflare Pages, Linux, Tailscale

EXPERIENCE

Full-stack Developer Intern | Avera Data Academy

Jan - Jun 2026

Platform design | On-premises IT | Next.js | TypeScript | Supabase | Vercel

- Coordinated with academic, operations, and administrative teams to translate requirements into course discovery, student accounts, timed assessments, and admin workflows.
- Designed, built, and deployed the production platform across five academy tracks, including Supabase Auth and PostgreSQL workflows for role-aware profiles, exam sessions, questions, attempts, and results.
- Managed the academy's on-premises IT infrastructure: workstation and peripheral setup, user access, network and connectivity troubleshooting, and day-to-day maintenance.
- Coordinated rollout and handover with staff, enabling CSV and Excel question imports, session creation, performance review, and counseling-request capture.

Web Developer | CloudStudio108

Marketing site | Booking flow | Media performance | Cloudflare Pages

- Built and deployed a production marketing and booking site that presents the studio, services, pricing, and structured enquiry flow.
- Prepared and delivered 50+ WebP media assets with lazy loading and reserved dimensions for a fast, stable image-heavy experience.

PROJECTS

SyncPlayer - Peer-to-peer Media Synchronization

React | TypeScript | WebRTC | WASM | HLS.js

- Built peer-to-peer media sync with WebRTC DataChannels, latency checks, and typed React and TypeScript contracts.
- Designed connection-state and media-identity helpers so browser peers can diagnose drift and mismatched media.

TunnelPane - Secure Self-hosted File Transfer

Node.js | Docker | Cloudflare Tunnel | Zsh | PowerShell

- Built secure browser and terminal file transfer clients in a read-only Docker container behind loopback-only HTTPS access.
- Implemented resumable chunked uploads, HTTP range downloads, and two-pane Zsh and PowerShell terminal clients.

Currency Converter - Offline Mobile Application

Flutter | Dart | Provider | HTTP | Shared Preferences

- Built a Flutter app for fiat, cryptocurrency, and custom currencies with favorites and cached rates for offline use.
- Used Provider state and local preferences to preserve the user's conversion setup between launches.

Sys-Config - Cross-distribution Linux Setup

Bash | JSON | jq | apt | dnf | pacman

- Built cross-distribution Linux provisioning with JSON profiles, package detection, privilege handling, and unattended setup.
- Implemented pre-flight validation and dependency bootstrapping so invalid profiles fail before changing system state.

Linux on a Smartphone: Realme 6

Linux kernel | Droidian | Docker | Glances | Tailscale

- Modified a device kernel for Droidian and operated the phone as a monitored Linux server with containerized services.
- Debugged boot, partition, and image-deployment failures across repeated flash cycles on unsupported hardware.

EDUCATION

B.Tech in Computer Science | Ajeenkya DY Patil University

2022 - 2026

Pune, Maharashtra | CGPA: 8.06
